

Recurrence of child protection concerns after an investigation case has closed

What does this indicator measure?

- This performance indicator measures the percentage of families with closed child protection investigation cases in a fiscal year who were re-investigated within 12 months after case closing and child protection concerns were verified.
- *Most families (91.5%) do not have a recurrence of child protection concerns within 12 months of case closure (2021/22).*

closed**

Recurrence of child protection concerns after an investigation case has closed

DEFINITION

The percentage of family cases closed at investigation in a fiscal year that were re-investigated within 12 months after closing and where the child protection concerns were verified.

WHY IS THIS MEASURE IMPORTANT?

Closing a case following an investigation assessment suggests that there are no child protection concerns requiring ongoing Children’s Aid Society involvement or there are factors that are present that are beyond the control of the agency. However, at the conclusion of many investigations, workers make referrals to community-based services for families.

This measure is important for further understanding of those families that return to a Children’s Aid Society with verified protection concerns and those that do not, in terms of the families’ willingness to work with agency, the emergence of new child protection concerns not present at the time of closure, the level of engagement and intensity of the services offered, as well as the risks, strengths and needs of children and families.

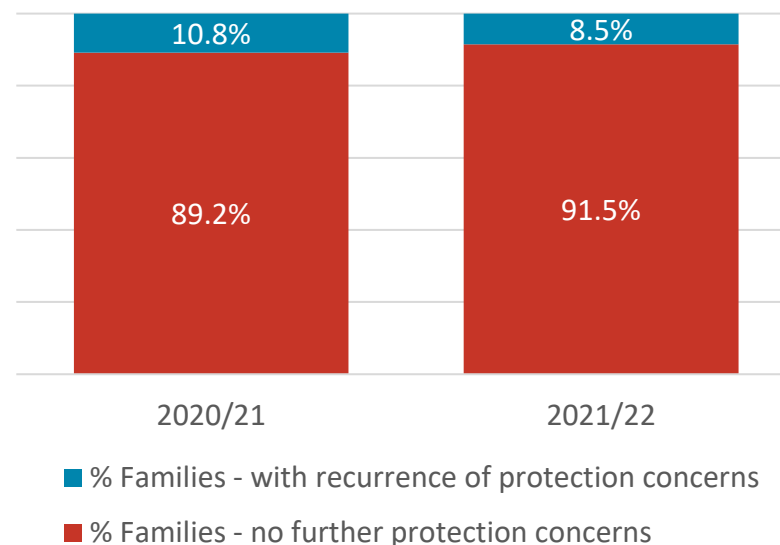

LIMITATIONS OF THE DATA

The data results do not identify whether it is the same child who experienced a recurrence of Protection concerns; only that protection concerns have reoccurred in the same family. The reason for investigation and verification represents any recurrence of any kind of protection concern rather than recurrence of the same protection concern (e.g., a case may return with different protection concerns than those originally investigated). Data represent only those families reported to a Children’s Aid Society and do not include protection concerns that are not reported or not identified.

KEY CONSIDERATIONS

There is no agreed-upon benchmark for the “acceptable” level of recurrence. While a lower level is generally desirable, the rate of recurrence is unlikely ever to be 0% for a variety of reasons including the long-lasting nature such as struggles experienced by families commonly known to the child welfare system, e.g., poverty, substance abuse and mental health problems. Furthermore, the reconnection of some families with the child welfare system can be in and of itself a protective factor to children whose families experienced valuable supports from the agency which addressed their risks and needs.

Recurrence of Child Protection Concerns in a Family after an Investigation

RESULTS

Data suggest that the majority (i.e., 89.2% in 2020/21, and 91.5% in 2021/22) of families do not return for service within 12 months of case closure. A minority of families return to a Children’s Aid Society with verified child protection concerns within 12 months: 10.8% and 8.5% in 2020/21 and 2021/22 respectively.

ABOUT THE DATA

These data have been compiled and analyzed by the University of Toronto, Factor-Inwentash Faculty of Social Work through the Ontario Child Abuse & Neglect Data System.

Recurrence of Child Protection Concerns in a Family after an Investigation

Year	% Families with recurrence of protection concerns	Number of Investigations
2020-21	10.8	1514
2021-22	8.5	1682

Recurrence of child protection concerns in a family after ongoing protection services were provided

What does this indicator measure?

- This performance indicator measures the percentage of families with closed ongoing protection cases in a fiscal year that were reinvestigated with verified child protection concerns within 12 months following case closure.
- *The majority of families who received ongoing protection services (91 percent) did not return for service within 12 months of case closure in the two years under review (2021-22).*

9%

% of families that return after ongoing protection services were provided

Recurrence of child protection concerns in a family after ongoing protection services were provided

DEFINITION

The percentage of family cases closed at ongoing protection in a fiscal year that were re-investigated within 12 months after closing where the child protection concerns were verified.

WHY IS THIS MEASURE IMPORTANT?

Closing a case following ongoing services suggests that child protection concerns have been addressed and no longer require ongoing Children’s Aid Society involvement or there are factors that are present that are beyond the control of the agency. The recurrence of child protection concerns is higher for these families as they often experience multiple complex difficulties, such as poverty, mental health issues, addictions and other adverse life events.

However, at the conclusion of Children’s Aid involvement, many families continue to receive supportive services from other agencies in the community. This indicator measures the extent to which services have been successful in reducing risk to children. This measure is important for further understanding of those families that return to a Children’s Aid Society with verified protection concerns and those that do not, in terms of the families’ willingness to work with agency, the emergence of new child protection concerns not present at the time of closure, the level of engagement and intensity of the services offered, as well as the risks, strengths and needs of children and families.

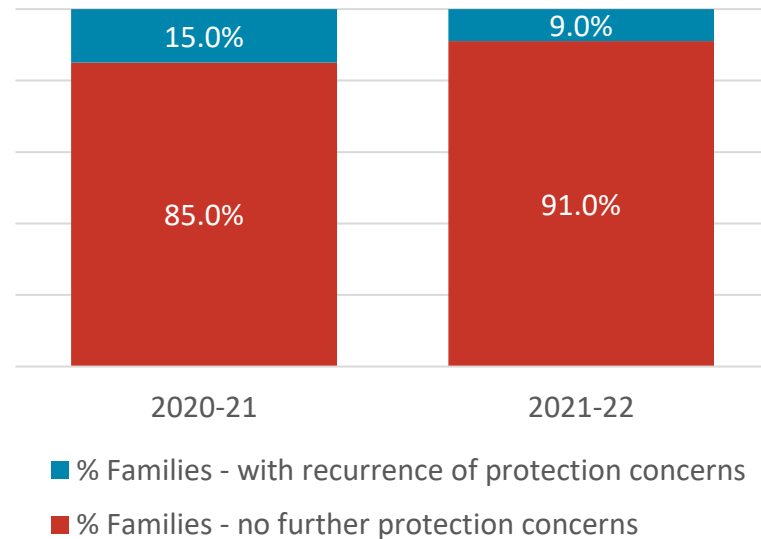

LIMITATIONS OF THE DATA

The data results do not identify whether it is the same child who experienced a recurrence of protection concerns; only that protection concerns have reoccurred in the same family. The reason for investigation and verification represents any recurrence of any kind of protection concern rather than recurrence of the same protection concern (e.g., a case may return with different protection concerns than those originally identified). Data represent only those families reported to a CAS and do not include protection concerns that are not reported or not identified.

KEY CONSIDERATIONS

There is no agreed-upon benchmark for the “acceptable” level of recurrence. While a lower level is generally desirable, the rate of recurrence is unlikely ever to be 0% for a variety of reasons, including the long-lasting nature of many of the struggles experienced by families commonly known to the child welfare system, e.g., poverty, substance abuse and mental health problems. Furthermore, the reconnection of some families with the child welfare system can be in and of itself a protective factor to children whose families are connected with necessary supports.

Recurrence of Protection Concerns in a Family after Ongoing Protection Services were Provided

RESULTS

Data suggest that the majority (i.e., 85-91%) of families do not return for service within 12 months of service closure. A minority of families return to a Children’s Aid Society with verified child protection concerns within 12 months: between 9-15% in each of the years under review.

ABOUT THE DATA

These data have been compiled and analyzed by the University of Toronto, Factor-Inwentash Faculty of Social Work through the Ontario Child Abuse & Neglect Data System.

Year	% Families with recurrence of protection concerns	Number of Ongoing Protection Services
2020-21	15.0	340
2021-22	9.0	361

Days of Care by Placement

What does this indicator measure?

- For all children and youth admitted to the care of a Children's Aid Society, this indicator provides/measures (the percentage) of days of care provided in the fiscal year, by placement type (i.e., family-based care versus non-family-based care).
- *The majority of days of care provided are family based in each of the years under review.*

69%

% of children/youth in family-based care

DAYS OF CARE BY PLACEMENT TYPE

DEFINITION

For all children admitted to the care of a Children's Aid Society, the percentage of days of care provided in the fiscal year, by placement type (i.e., family-based care versus non-family-based care).

WHY IS THIS MEASURE IMPORTANT?

Family-based care is the preferred placement setting for the majority of children in care. Children placed in family settings have greater opportunities to form a connection with consistent caregivers and to experience the benefits associated with membership in a family.

The research tells us that children placed in family-based care are more likely to achieve permanency when they exit care, i.e., be discharged to parents or family including adoptive families or legal custody arrangements, compared to children in group care.

LIMITATIONS OF THE DATA

Data illustrate the number of days of care provided by a Children's Aid Society rather than the proportion of children by placement type. There are variations across Societies in how placement types are classified (i.e., as family versus non-family-based care).

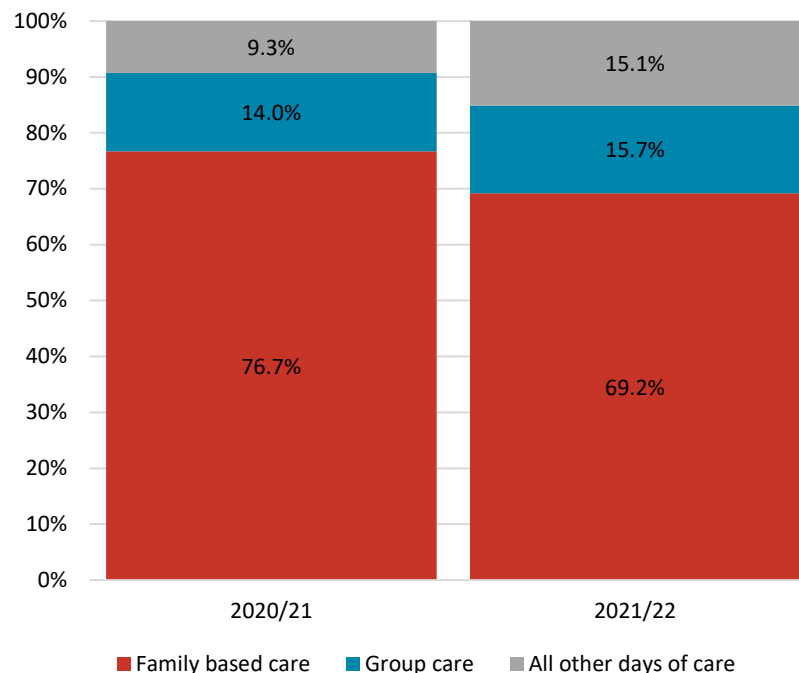

CONTEXT

The focus of Children's Aid Societies is to keep children safe in their home of origin with necessary supports for their family. When a child cannot remain safely in their home of origin, a Children's Aid Society provides an alternative quality of care such as living with Kin or Foster Care. A prominent focus of the Ministry of Community, Children and Social Services Transformation Agenda was to expand family-based care options for children to include and value the participation of extended family members and significant individuals in the child's community.

KEY CONSIDERATIONS

While a high rate of family-based care is desirable, selection of a placement setting should be first and foremost influenced by the needs of the child and the fit to the placement. Given the mandate of a Children's Aid Society, and the nature of the challenges experienced by some children and youth, it can be difficult for agencies to recruit and train quality alternative care through Kin arrangements or Foster Parents.

The Days of Care by Placement Type

RESULTS

The majority (i.e., 69.2-76.7%) of days of care provided are family-based in each of the years under review.

ABOUT THE DATA

These data have been compiled and analyzed by the University of Toronto, Factor-Inwentash Faculty of Social Work through the Ontario Child Abuse & Neglect Data System.

The Days of Care by Placement Type

Year	Family-based Care	Group Care	Other
2020-21	76.7%	14%	9.3%
2021-22	69.2%	15.7%	15.1%

Time to Permanency

What does this indicator measure?

- This performance indicator measures the cumulative percentage of children and youth who leave care within a specific time period since their year of admission to care (i.e. 12 months) for 2021/22.

55.3%

**% of the children that
come into care exit
within 12 months of
their admission.**

Time to Permanency

DEFINITION

For all children admitted to the care of a Children’s Aid Society during the fiscal year, the cumulative percentage discharged within a specific time-period (i.e., 12 months, 24 months and 36 months since admission).

WHY IS THIS MEASURE IMPORTANT?

Providing children with permanency in their care promotes healthy development, encourages continuity in relationships, a sense of community and identity. However, for some children reunification with their family of origin is not possible and stable alternatives must be pursued.

The child welfare system in Ontario has multiple options through which permanency can be achieved (e.g., reunification with parents, legal custody, and adoption). Permanency planning is a significant focus for children in care, whose permanency status, both legally and psychologically, is uncertain.

LIMITATIONS OF THE DATA

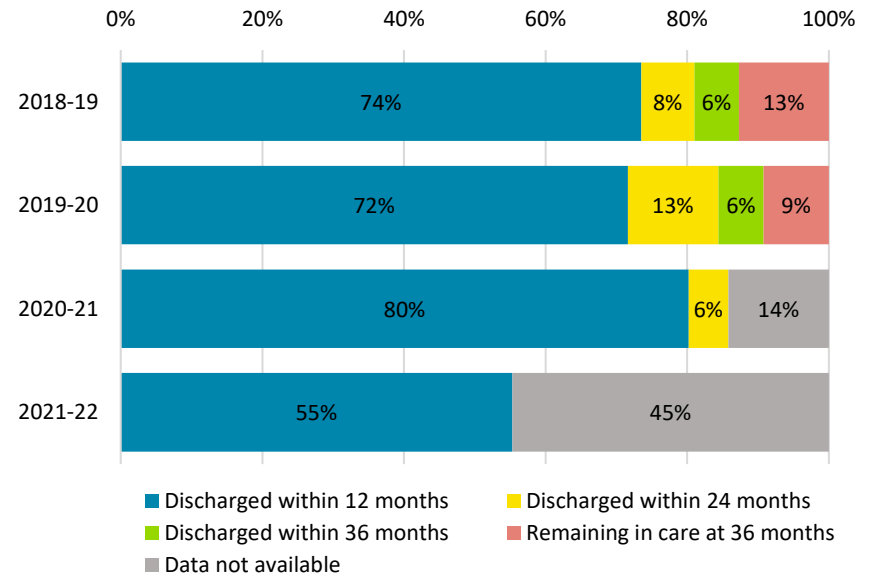

Not all discharges represent permanency achieved; however, this measure is considered a good proxy for permanency. To understand permanent versus non-permanent exits from care, data by discharge type are required. Customary care (culturally appropriate care arrangements for Indigenous children) is not included in these data at this time.

KEY CONSIDERATIONS

The timing and nature of permanency may look different for every child depending on the child’s needs, family circumstances, court processes, and availability of community service providers. A key factor that influences time to permanency is the child’s age at admission. Children who enter care at a young age are more likely to be discharged to certain types of permanency (e.g., adoption) compared to older children.

Young children often achieve permanency within shorter timeframes, supported by legislation that limits the allowable cumulative time in short-term care for children under 6 years of age compared to older children. An additional factor that impacts time to permanency is the needs of the child, with more complex needs associated with longer time frames to achieving permanency.

Time to Permanency

RESULTS

Data shown above illustrate that of all children admitted in any given fiscal year, over half (55-80%) exit care within 12 months post-admission as shown by the dark blue bars. By 24 months post-admission, about 86% of children have left care as shown by the yellow bars. By 36 months post-admission, 87-91% of children admitted in years 2018-19 to 2019-20 have exited care, with 9-13% of children remaining in the care of a Children’s Aid Society as shown by the red bars.

ABOUT THE DATA

These data have been compiled and analyzed by the University of Toronto, Factor-Inwentash Faculty of Social Work through the Ontario Child Abuse & Neglect Data System. Sufficient time has not yet elapsed for results to be available for the following: 36 months for children admitted in 2020-21, and 24 to 36 months for children admitted in 2021-22.

The Time to Permanency

Year	Number of children & Youth admitted to care
2020-21	106
2021-22	38

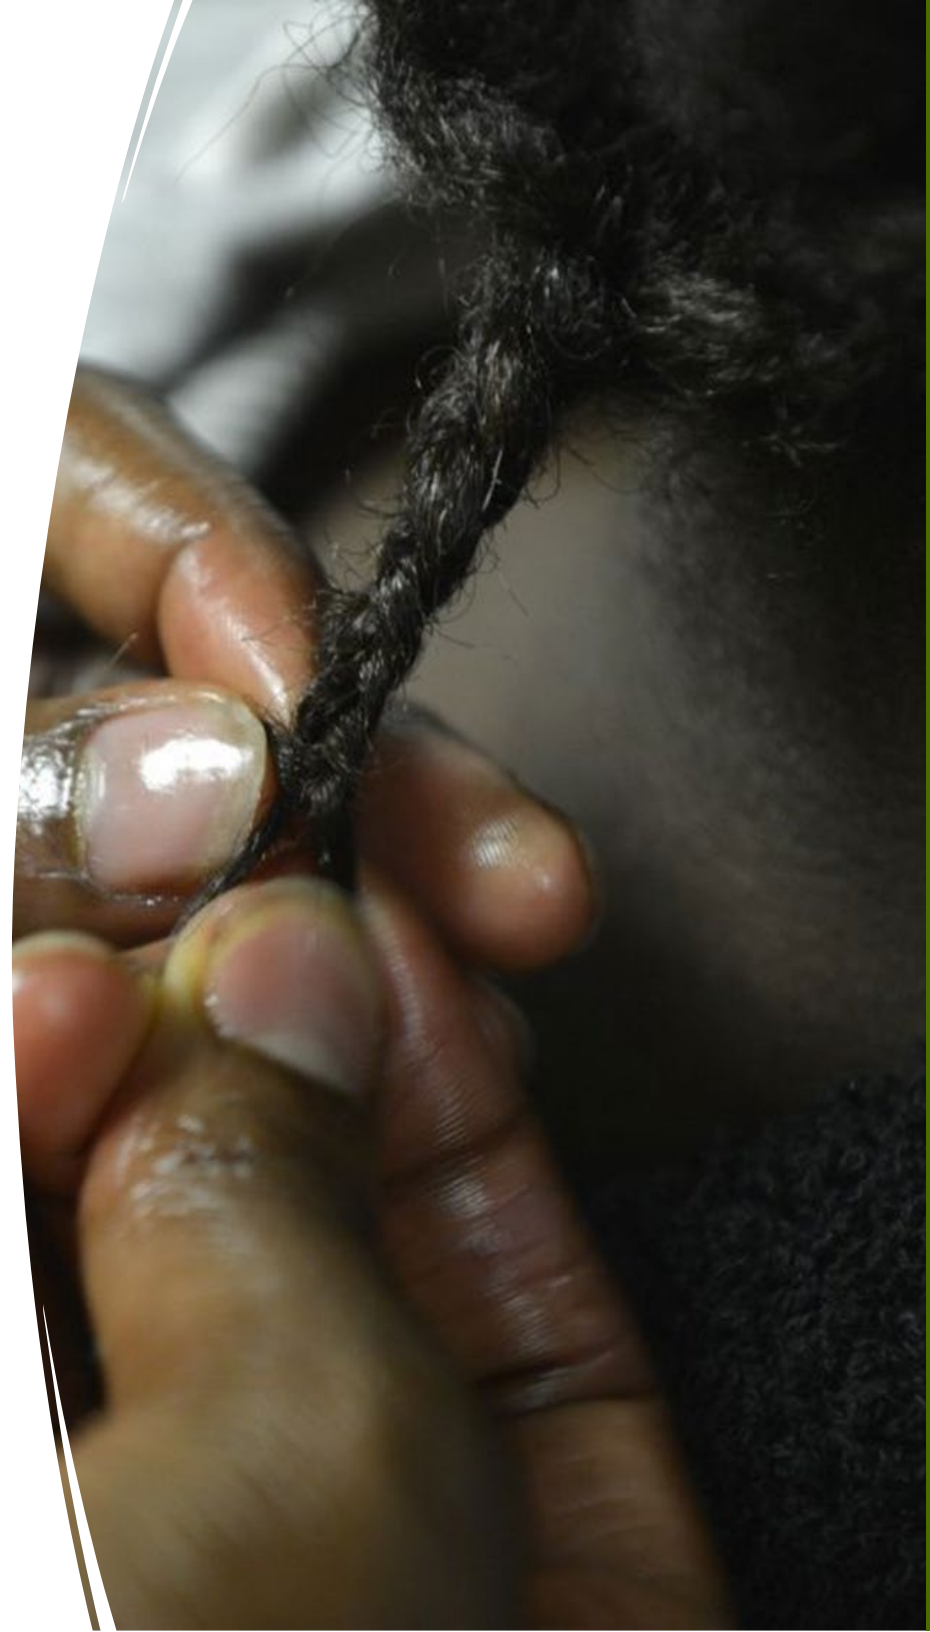

Quality of the Caregiver-Youth Relationship

What does this indicator measure?

- This performance indicator measures the average score for children in care (aged 10-17) from a standard scale that measures a young person's perception of the quality of the relationship with his or her primary caregiver.
- *Children and youth in care between the ages of 10 to 17 have scored the quality of their relationship with their caregiver between 6.8 to 7.3 in 2021.*

6.8-7.3

**Average score
of the quality
of the
caregiver-
youth
relationship**

Quality of the Caregiver-Youth Relationship

DEFINITION

The average score for children in care (aged 10-17) from a standard scale that measures a young person's perception of the quality of the relationship with his or her primary caregiver. This eight-point scale measures the child/youth in care's response to the following four questions:

- * How well do you feel your caregiver understands you?.
- * How much fairness do you receive from your caregiver?
- * How much affection do you receive from them?
- * Overall, how would you describe your relationship with them?

Each of these four questions is rated from 0 to 2, yielding a composite score with a minimum of 0, and a maximum of 8.

WHY IS THIS MEASURE IMPORTANT?

The quality of the caregiver-youth relationship is at the heart of service to children in care. Research demonstrates that a young person's perception of the quality of their relationship with their caregiver predicts the following: current happiness; self-esteem; positive behaviour; and placement satisfaction and stability. As scores increase on the quality of the caregiver relationship scale, so do positive outcomes across each of these areas (e.g. higher self-esteem).

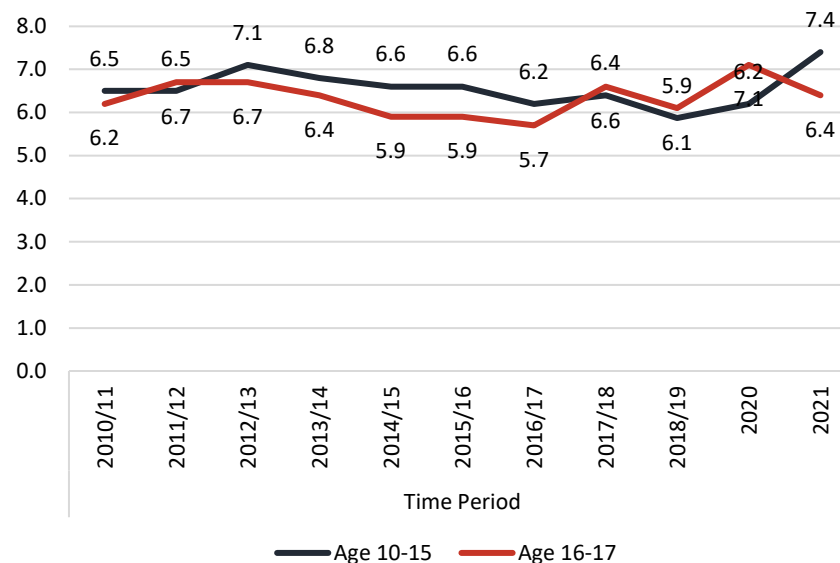

LIMITATIONS OF THE DATA

These data form part of the Ontario Looking After Children assessment, which is completed annually for all children who have been in the care of a Children's Aid Society for at least one year. A very small number of children who should have completed this assessment are not assessed within the required timeframes. Therefore, their data are not included in these results. Child protection workers ask children to provide responses verbally with the caregiver present and the child's responses may be influenced by this approach. Children usually respond to the 4 questions based on how they are feeling that day not necessarily how they have felt over the past year.

KEY CONSIDERATIONS

The key influencing factors in measuring the quality of the caregiver and youth relationship include; the age of the youth, the type of placement, gender and the length of the placement.

The Quality of the Caregiver and Youth Relationship

RESULTS

Children in care between ages 10 to 15 have scored the quality of their relationship with their caregiver higher (6.5-7.3 out of 8) than youth aged 16 and 17 who scored the quality of their relationship with their caregiver 6.2-6.8 out of 8.

ABOUT THE DATA

These data have been compiled and analyzed by the University of Toronto, Factor-Inwentash Faculty of Social Work through the Ontario Child Abuse & Neglect Data System.
